## New filter cartridges

Comprehensive filtration for your aquarium

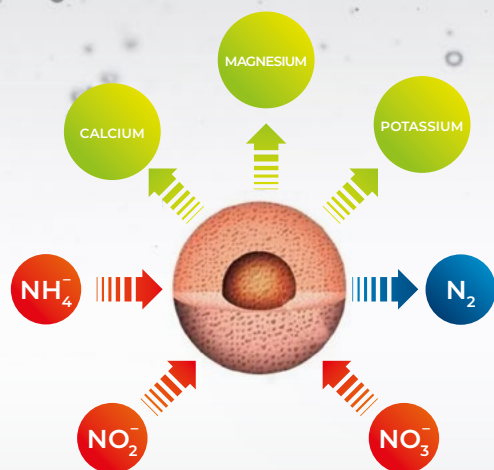

Each of Aquael's new filter cartridges performs a unique aquarium water cleaning function

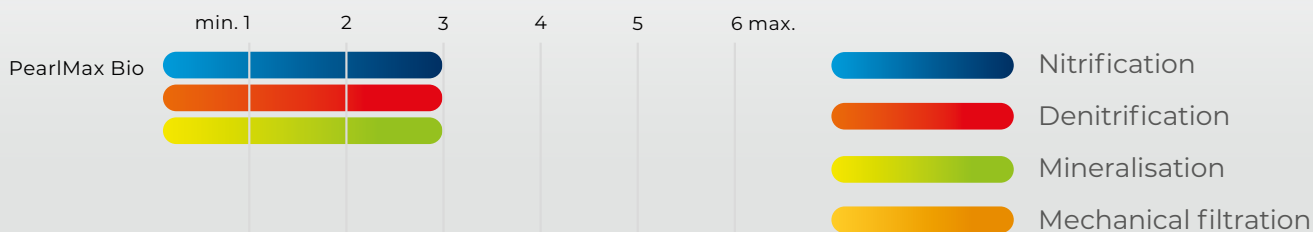

**PEARLMAX BIO** is a filter medium with active adsorption capacity. Inside, it has cavities that create concentration differences between  $\text{NH}_4$  and  $\text{NO}_2$  ions, actively adsorbing them onto its surface.

1:1

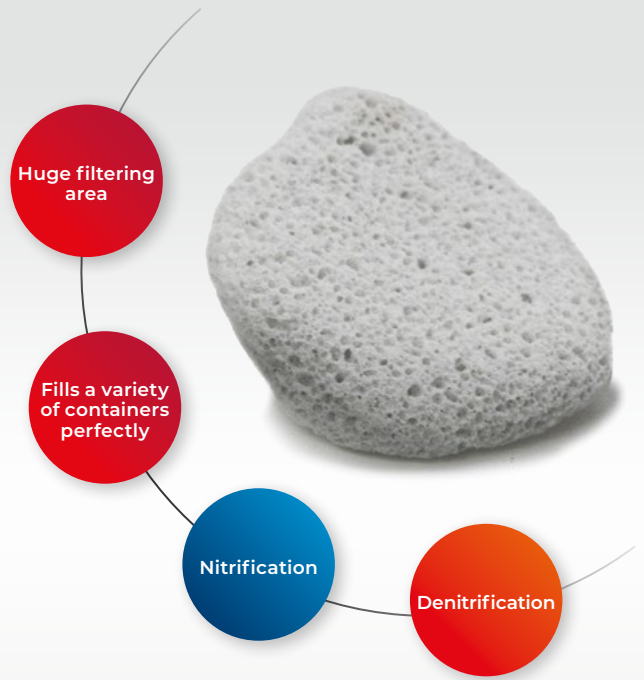

These unique filter media are rich in trace elements, which are released gradually. This supports the metabolism of aquatic organisms, contributing to their healthy growth and development. PEARLMAX Bio not only purifies the water, but also supports the health of the creatures living in your aquarium.

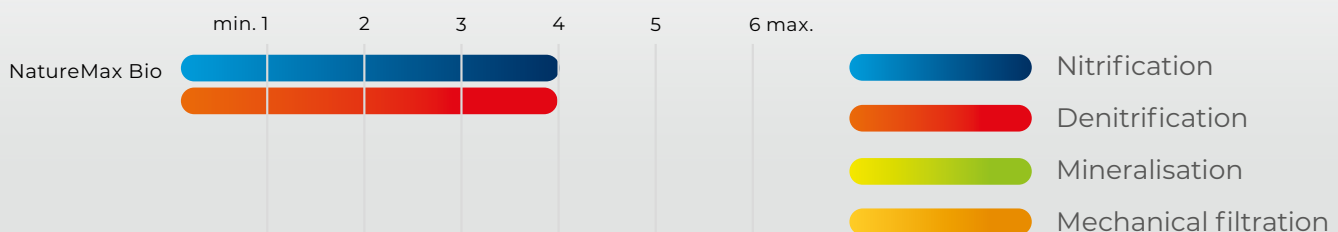

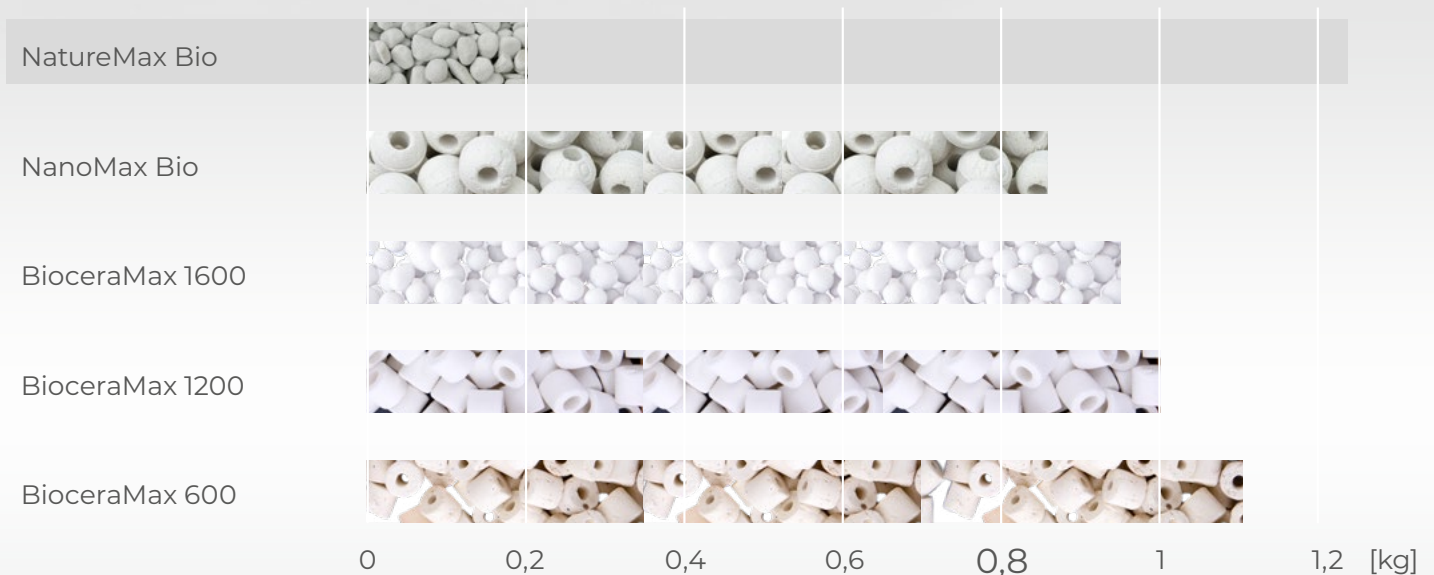

**NATUREMAX BIO** is a natural, extremely light filter media for small and large aquarium filters. Thanks to their unique structure and ideal microporous properties, they provide an excellent environment for nitrifying and denitrifying bacteria. The microporous structure of NATUREMAX BIO provides optimum conditions for colonisation with nitrifying and denitrifying bacteria, allowing the media to rid the water of both nitrates, nitrites and ammonia.

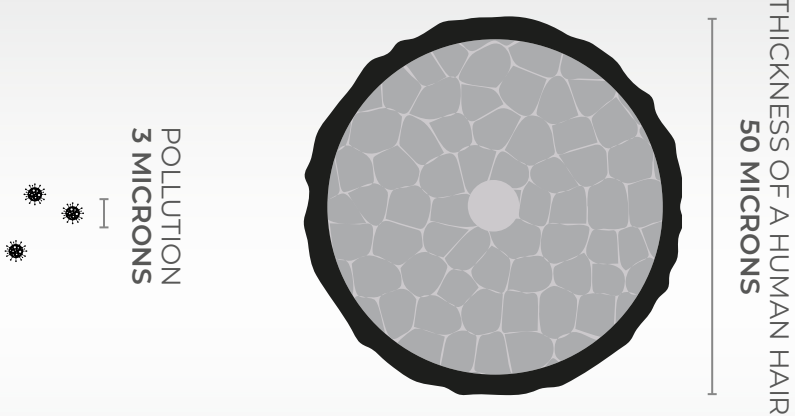

### Weight of 1 litre of biological filter media

**MAGIC BALLS** is an effective mechanical filtration cartridge in the form of polymer fibre balls retaining contaminants up to 3 microns in size. It represents the final stage of filtration in the aquarium, by trapping impurities on its surface. They ideally act as the last layer of the aquarium filtration system.

1:1

MAGIC BALLS complete the filtration by removing anything that may have escaped its attention in the earlier stages. An additional advantage of MAGIC BALLS is that they are environmentally friendly, as they are recyclable.

### NanoMax Bio

- Largest available filter area
- Unique microparticle sintering technology
- Maximum level of denitrification

### NatureMax Bio

- 100% natural origin
- Extremely low bulk density
- Differentiated cartridge structure

### PearlMax Bio

- Unique design
- Ion adsorption
- Mineralisation

### Magic Balls

- Captures particles up to 3 microns
- Perfectly fills the container
- Designed for recycling
